Athena + Configuration Manager = Powerful Device Management

Today's IT administrators are challenged with the proliferation of mobile device and tablet platforms coupled with the complications of supporting corporate-liable and personal-liable devices—intensifying enterprises' requirements to manage mobile devices like never before. Because these devices can run line-of-business applications and contain sensitive corporate data, they need to be managed and secured similarly to laptops or workstations. In fact, many enterprises would prefer to manage their mobile devices and tablets with the same enterprise management platform used to manage all of their other corporate resources to allow them to streamline infrastructure costs and improve helpdesk efficiencies.

Athena™ by Odyssey Software, meets all these requirements.

Athena complements and extends the native mobile device management functions of the Microsoft® System Center Configuration Manager 2007 and 2012 platforms to enable comprehensive management of iOS (iPhone/iPad/iTouch), Android, BlackBerry®, Windows® Phone 7, Windows® Mobile, HP webOS, and Nokia Mail for Exchange-enabled smartphones, as well as Windows® Embedded CE devices. Athena's distinctive architectural design uses the existing Configuration Manager console to provide robust management and security of diverse device deployments.

Put the power in your hands with Athena.

Why add complexity and unnecessary cost to your enterprise management strategy by introducing stand-alone products for mobile device management? Let Athena help you to efficiently and effectively manage all of your mobile devices and tablets from your existing System Center Configuration Manager instance!

Let us show you the power of Athena with a demonstration.

Please visit www.odysseysoftware.com, or call us at +1 585-214-2409 x120 for more information.

Athena's seamless integration into the Configuration Manager 2007 and 2012 platform provides unique benefits:

- All device management functions are performed from the native Configuration Manager console as a "single pane of glass" for all enterprise and mobile resources
- All mobile and enterprise asset information is contained in the native Configuration Manager database
- Platform facilities such as the Configuration Manager Dashboard and SQL Reporting Services are leveraged
- No Odyssey Software-specific servers or appliances are added to the native Configuration Manager infrastructure—thereby leveraging the platform's inherent scalability, reliability and security

Only Athena brings industry-leading device management capabilities to the Configuration Manager 2007 and 2012 platforms for iOS (iPhone/iPad/iTouch), Android, BlackBerry, Windows Phone 7, Windows Mobile and HP webOS smartphones, Windows Embedded CE, and Nokia Mail for Exchange-enabled devices. Depending on the mobile device platform, management capabilities enabled by Athena can include:

- Remote control/remote tools
- Device hardware, software and health reporting
- Provisioning of software, settings and certificates
- Current and historical device location information
- Wireless carrier details, phone & messaging logs, roaming status
- Detecting and reporting of device OS tampering (jail breaking, rooting, etc.)
- Management of device policies (specify, deploy, report, modify, etc.)
- Device lock and wipe functions

Details about all the device management functions for each mobile device platform are provided in the *Athena for Microsoft System Center Configuration Manager* technical brief, available by request.

ODYSSEY SOFTWARE is a leading provider of enterprise-class mobile device management software products for today's most popular device platforms. Athena, Odyssey Software's flagship product, extends and complements the native device management capabilities of the Microsoft System Center Configuration Manager platform.
