Inframom Cloud Services

“Inframom Cloud Services delivers cost effective, elastic and scalable, private and public cloud based System Center Services that can be hosted in your own data center or across Inframom’s and Microsoft’s data centers.”

The continued march of the IT industry towards the cloud based model demonstrates a desire by organisations to change their IT function into a utility based service that can be scaled up or down according to demand.

Inframom’s iCloud solution provides you with a number of both private and public cloud based services that deliver you flexible, pay as you go System Center based services that put you in full control of what you consume and spend.

Inframom’s Management as a Service (Maas) and Software as a Service (SaaS) offerings deliver to you a number of key solutions that can be hosted either in your organisations existing private cloud environment, in our own datacenter environment or as part of Microsoft’s public cloud infrastructure.

iCloud can help you to deliver solutions that allow you to achieve effective management of your desktop environment, full accountability over your virtual infrastructure and end to end management of public cloud based services such as Azure.

With very little upfront commitment you can quickly begin to realise the maximum benefits of cloud based Microsoft System Center solutions allowing you to remain both competitive and agile in an ever changing landscape.
